The Ravaglioli® “Express” and “Spirit” heavy duty truck alignment system represents the latest in alignment technology allowing alignments on trucks, trailers, coaches, buses, multi-axes, and more. No Roll-Back Required! The Express and Spirit allows for faster, more accurate, alignments with portability and remote viewing and control. The software is customized for all truck axle configurations 2, 3, 4 and 5 axle configurations and features two head steer axle measurement possibilities. This system features new heavy duty designed sensors, new software, and a newly designed high-performance cabinet.

The Express and Spirit systems are backed by AMERICAN service and support and built by one of Europe’s oldest and leading manufacturers. This system is fully equipped... not stripped. Our 8CCD Bluetooth wireless sensor heads are accurate and reliable, and each head is a fully functional remote control. By establishing a measuring path for all four sides of the vehicle this system is capable of additional collision measurements and calibration tracking.
