

Crossbeam Accessory

The PCL-18B has a Crossbeam available as an accessory.

The Crossbeam goes between two PCL-18Bs, sitting in their troughs.

The Crossbeam comes with adapters: two cradle adapters (which fit onto the Crossbeam), two short cradle lift adapters, and two tall cradle lift adapters.

The Crossbeam also comes with a caster kit, which allows the Crossbeam to be easily moved around.

The Crossbeam can support a full 36,000 lbs / 8165 kg for much of its length of 122 inches / 3098.8 mm. However, as the adapters are moved towards the middle of the Crossbeam, the load that can be supported is reduced to a maximum total of 12,950 lbs.
