

Semi Hood Dolly

LK4035

FEATURES

The Semi Hood Dolly SKU# LK4035 is a great dolly to place semi hoods on while repairs are being performed to the semi or the hood. Most shops place the semi hood on the shop floor when removed from the truck. When doing this, there is a chance of scratching or scraping the hood. When the hood is stored on the floor it is typically in the way of other technicians when performing their repairs and then is required to be moved with the labor of three or four technicians lifting and physically handling it.

Benefits

Place the hood on the dolly when off the truck and avoid the potential for scratches or scrapes

If the hood needs to be relocated, extend the extension handle and move the hood around the shop at ease with one technician

Perform collision repairs to the hood while on the dolly

Move the hood in or out of the paint booth easily with the dolly

The Semi Hood Dolly is a great way of a busy shop keeping the Lift King free to remove or install hoods
