

Box Attachment

LK4053

FEATURES

- ◆ Reduce the need of four technicians to only one technician to remove or install a pickup bed
- ◆ Avoid the risk of human injury from physical strain.
- ◆ Improve quality by reducing the risk of damage

Front Mount Photo: The Front mount photo will show how the pickup box is secured by sliding the front mount under the box rail. The technician show extend the boom so the box attachment mount slides under the bed rail just ahead of the wheel wells (not to the front of the bed).

Alternative Mount Photo: The alternative mount (seat belt straps with a hook) is designed to only be used if the collision damage is extreme and the box is out of square. It would also be used if the box has no hardware such as tail gate hinge pins. The technician would place the stapes with the hook under the bed lip and apply a little pressure to secure it. When using this application the box will have a small amount of movement when it is lifted off the frame. It is still a one technician installation or removal process.

Box Attachment Photo: This photo shows the two forward under the box rail mounts, two rear tail gate hinge pin mounts and two alternative mounts.

Bushing Kit Photo: There are four bushings and these are included with the box attachment (SKU # LKBA). In the early 2000's and prior, all tailgate hinge pins were similar in size and the bushings were not needed. In the later 2000's several OEM's reduced the size of the hinge pins, the bushings provided are to adapt to the smaller tailgate hinge pins for a snug fit. The technician would fit the bushing with the hinge pin and then insert the bushing into the rear mount on the lift.
