

Bushing Kit

LK4056

FEATURES

In the early 2000's and prior, all tailgate hinge pins were similar in size and the bushings were not needed. In the later 2000's several OEM's reduced the size of the hinge pins, the bushings provided are to adapt to the smaller tailgate hinge pins for a snug fit. The technician would fit the bushing with the hinge pin and then insert the bushing into the rear mount on the lift.

The Bushing Kit is needed to use with the Box Attachment for working on 2014 and newer GM pick-ups, 2016 Colorado and Canyon, or 2017 and newer Ford pick-up boxes.

The Bushing Kit will also work well with many other models of pick-ups.
